AESTHETIC

THE SALT VITALHEATER

Discover the unique SALT VITALHEATER which combines modern infrared heating technology with the natural warm storage capacity from „Himalayan“ salt.

We create handcrafted individual items from „Himalayan“ salt bars which combine an appealing design, a cozy source of warmth, as well as an efficient way of heating in a unique and new way.

Handmade in Austria

SOOTHINGLY RELAXING

Handmade in Austria

A HEALTHY INDOOR ENVIRONMENT

- Positive effect of salt on the respiratory system:
Sea climate at home
- Higher humidity level: Existing moisture is withdrawn from walls and at the same time avoids formation of mold
- Fewer dust particles and allergens: Reduced air circulation through infrared heating*
- Health promoting effect: As a result of the therapeutic effect of infrared light

** in comparison with the convection heat of conventional heating systems*

MODERN HEATING ENGINEERING

- Simple to install: One power outlet is sufficient
- Convenient operation: Dimming and LED illumination
- Immediate radiant heat: Enjoy direct warmth
- Lasting warmth effect: long-lasting heat dissipation through the salt bricks
- Low operating costs: Cost-effective combination of infrared radiation and salt as a heat storage medium
- Efficient energy supply: Provides warmth even at low wattage (from 300 W)

SOLID AND INNOVATIVE

Handmade in Austria

UNIQUE DESIGN

- Modern auxiliary heaters – easy to install almost anywhere
- Handcrafted individual pieces for exclusive interior design
- Practical use and elegant shape
- Unique lighting effects as a result of the interplaying of colors by the „Himalayan“ salt bar
- Cozy atmosphere combined with pleasant comfort
- Exclusive design and custom-made; tailored to your wishes – A variety of models can be integrated into any room

SALT AND INFRARED

Salt begins to melt at 800°C (1,472° F) and is perfect as a heat storage medium. As soon as the SALT VITALHEATER is placed into operation the radiant heat of the infrared heating lamps is immediately noticeable. When the salt brick has warmed-up after a half an hour a thermal storing mass is created which continuously radiates heat throughout the surrounding area. The average temperature of the salt brick is reached at 95°C (203° F) in a fully heated room. Even if the heating lamps are dimmed, a large part of the heating radiation is retained.* The watt strength of the infrared heating lamps (300-2000 W) is significantly lower than that of conventional electric heaters. For the first time this makes electrical heating as an economically affordable option.

SOLID AND
STABLE

PLANNED LONG DURABILITY

Based on considerations of reliability we purposely do not incorporate high tech features such as controlling capabilities using WLAN (WiFi), smartphone or apps; Rotary and toggle switches which have proven themselves over the decades supports our goal to offer you a durable and reliable product.

HANDMADE IN AUSTRIA

Our SALT VITALHEATER is produced in Austria with a high degree of purely handcrafted work and with the utmost care. This allows us to best meet the requirements of the valuable natural material „Himalayan“ salt and guarantee the lasting quality and sustainability of our products. Our company philosophy is based on the principle of only using the best and most natural materials from fair trade commerce. We also rely on domestic production and the support of the local community.

ECOFRIENDLY
AND DURABLE

THE SALT VITALHEATER

- It is solid, stable and durable.
- It heats by means of modern infrared lamps which depending on the model can consume between 1,000 and 2,000 watts of power and is efficiently converted into thermal energy.
- You can use your SALT VITALHEATER during the summer thanks to the additional LED assembly as a stunning illuminated object. Its use is not limited to the cold months of the year.
- Its light provides an unparalleled pleasant atmosphere in every room thanks to the reddish-orange radiant heat of the infrared lamps as well as the natural color of the „Himalayan“ salt. The output of the heater can be continuously regulated by high performance dimmers.
- You will feel the heat immediately after switching the heater on as the „Himalayan“ salt is partially permeable to electromagnetic radiation (i.e. radiation which can be detected by our senses such as light or heat).
